Abstract (en)

[origin: WO9631407A1] A protective component to be fitted on or in an especially rod-like object (1) with springy longitudinal blades (2) on its inner or outer wall is to be rationally producible and usable. To this end the protective component with its blades is axially open at both ends. In addition, a protective component in the form of a protective sleeve can be opened in order to be able to be pushed transversely on a rod-like object (1).
