Abstract (en)

[origin: WO9631670A1] A method for fastening a sealing foil (4) to an underlying structure (1). Before the sealing foil is provided, bonding elements (2) are provided on or in the underlying structure. In many cases gravel or the like is provided on the sealing foil with a view to weighting said sealing foil. The use of a thermal adhesive element as the fixing means and a proper heat-conducting foil as the sealing foil makes it possible to make the joint between bonding element and sealing foil after the sealing foil has been provided.
