Abstract (en)

[origin: WO9631732A1] The invention concerns an adapter for general-diffuse miniature reflectors (1) containing an illuminating device (2). The adapter comprises a support element (5) lying on the edge (4) of the miniature reflector (1), at least two clamping elements (6) which are integrally formed on the support element (5) and engage behind the reflector edge (4), and at least one light deflector element (7) integrally formed on the support element (5) for influencing the emergence of light from the miniature reflector (1). The support element (5), the clamping elements (6) and the light deflector elements (7) are components of an integral adapter element (9) formed in one piece.
