Abstract (en)

[origin: WO9631851A1] A portable one-way radio pager comprising receiving means (4, 5, 6) for receiving radio messages, a memory (8) for storing the messages, a screen (2), a keypad (3), an electronic CPU (7) and a speaker (9). The CPU is designed to recognise specific messages known as "primary certification codes" and cause the speaker to output an encoded sound signal depending on a secondary code entered by the user using the keypad and an additional code accessible to the CPU. The encoded sound signal enables user identification.
