Abstract (en)
[origin: EP0819816A2] The cover strip (13) of the cover (12) engages over the door inside longitudinal edge of the metal body (11). The cover has a securing projection (14) adjacent to the cover strip and parallel to it. In the vicinity of the projection, the cover is vertically supported. The longitudinal edge of the metal body is a vertical rib, to which the securing projection is secured. The metal body has a support rib (16) which is anti-parallel to the securing projection. The support rib (16) has a formation (17) facing the vertical rib (15), which locates on the secured securing projection. With a securing component (18) of the vertical rib the formation (17) forms a slot (19) for inclined insertion of the securing projection (14) of the cover (12).
