Abstract (en)

[origin: EP0819906A2] The plate (2) contains bores (20) and a connecting passage (21), one end (30) of its passage (3) being sealed in one of the bores, while the other end (31) is inserted in the passage (6) in the exchanger. A gap (5) is formed between the passages and the passage is joined to the partition (4). The plate, passage and partition can be separate components joined together and to the exchanger, preferably by soldering. Alternatively they can be in one piece typically formed by a plastics injection-moulding.
