Abstract (en)

[origin: EP0820215A2] The body (50) has a socket housing (52), in which a heater is arranged with a mains connection (51) for the current supply. Also heating tubes (56) are provided, emanating upwards from the socket housing. Several heating tubes are arranged together to form a loose bundle. The heating tubes are designed as elongated elements, projecting outwards from the socket housing. The heating tubes are shaped in the manner of an indoor plant, and the socket housing is designed in the shape of a pot. The heating tubes can be designed with differing lengths and curvature, to create the effect of a bunch of flowers. The socket housing can be provided with rollers (14) for easy positioning.
