Abstract (en)
[origin: WO9632168A1] An element for securing a boot to a ski, including two separate securing members (6, 7) each connected to a spring (11) by levers (6a, 7a) engaging the head (16) of a tie rod. A linkage (20, 21) is inserted between the head of the tie rod and each of the levers. The linkages (20, 21) are elongated and a retractable stop is provided for selectively locking the end of each of the linkages. In the locked position, the linkage amplifies the movement of the tie rod relative to that of the lever.
