Abstract (en)  
[origin: EP0820866A2] The roller (1) is located in a special holder which is held both separately from and in common with the ink container (II) pivotably in the frame. The ink container is pivotably located in the holder, displaced axis-parallel to its location. The holder in common with the ink container pivotable from the roller is pivotable, whilst maintaining contact between the roller and the ink container, out of the operating position into an ink exchange position where the roller is freed from the ink flowing away from its rearward area into the ink container.
