Abstract (en)

The present invention relates to a steam generator (1) consisting of a water tank (2) connected to a boiler (3) by a pipe (5) which has inserted inside it an electric delivery pump (6) which controls the supply of water, from the tank (2) to the boiler (3), when necessary. The boiler (3) comprises moreover a single heating plate (18) associated in a close-fitting manner on the outside thereof by means of pressure casting. The bottom (11) of the boiler (3) is inclined so as to have at least two portions, a lower portion (12) and an upper portion (13). The heating plate (18) has mounted on it in the region of the upper portion (13) a thermostatic switch (16) located directly underneath an opening (15) connected to the supply pipe (5).
