Abstract (en)
[origin: EP0821108A1] A cover and frame assembly of the type comprising a frame adapted to be received in the ground, and a cover engageable with the frame to selectively prevent or allow access to an opening beneath the frame, the cover being formed in two parts (40a, 40b), and releasably secured together, the frame and cover being configured so as to allow the cover to be slid over the opening into the frame. Limited articulative movement is permitted between the two parts (40a, 40b) of the cover, which not only enables the cover to locate in the frame a "non-rock" manner, but also facilitates removal of the cover from the frame. <IMAGE>
