Abstract (en)

[origin: EP0821899A1] The support part (6) is withdrawably and pivotably guided by a push and pivot guide in the cabinet body (1). By movement of the cabinet drawer (5), the straight-line and pivot movements are coupled together. The pivot and push guide incorporates pivot levers (14, 15), of which one is connectable to the support part and the other is fitted to the cabinet body. The pivot lever connected to the support part is located in the push guide (11) rotatably through 360 degrees and is couplable with the other pivot lever. The support part with a pivot or rotary movement of its pivot lever and of the other pivot lever can be moved to different withdrawal positions.
