Abstract (en)
[origin: EP0821927A1] The accommodation device (1) arranged in the rear area of the vehicle is formed in cross-section as a rectangular profile component (3), the narrow sides (4,5) of which run at right-angles to the floor of the vehicle. The one side (7) of the accommodation device connects the narrow sides and has a one-sided open slot for receipt of the securing component (2), which at its closed end has a hook component (9). The hook component is releasably connectable with the securing component and is pivotable around an axis parallel to the surface normals of the floor of the vehicle and/or the side connecting the narrow sides.
