Abstract (en)

[origin: EP0822372A2] The ceiling light fitting has a lamp raster enclosed by light reflectors (11). The outer longitudinal side edges of the reflectors act as the longitudinal side edges of the light fitting. The transverse side edges of the light fitting are formed by the end plates of the lamp raster. The outer longitudinal edges of the reflectors have a bottom edge (11a) which rests on a rail (13) secured to the ceiling. This edge supports the fitting within the reception opening in the surface of the ceiling.
