Abstract (en)
[origin: WO9635192A1] An apparatus for selectable processing of an information carrier in the form of a sheet or in the form of a strip, comprising: a housing (2); guide track members (1, 3) mounted in the housing (2) for delimiting a first guide track and a second guide track designed for controlling an information carrier. The apparatus according to the invention is characterized in that the guide track members (5) delimit a processing track (8) which is open or can be opened in the guide direction and which is designed for selectable processing of an information carrier in the form of a sheet of undefined length and in the form of a strip of undefined length.
