Abstract (en)

[origin: EP0823227A2] The face side of the container has an adequately stiff transparent or opaque thermoplastic and pre-shaped housing (1) and the dark base or back part comprises two or more parts, which act as closure and on the peripheral sides (2,2a,5,5a) are completely, partially or mainly not welded, being sealed to one another by adhesive labels. The strip in the vicinity of the lateral edges (5a) of the housing has breakthroughs (8) running longitudinally and-or horizontally, in order to make possible easy tearing away using corresponding tabs. In the central or lower part or in the upper and in the lower part of the face-side housing a shelf-type corrugated surface is provided, between the folds (9) of which the writing implements are accommodated.
