Abstract (en)

[origin: EP0823523A2] The housing containing a pinion (11) for the coupling slider (12) comprises two identical halves (23a,23b) having projections (33a,33b) projecting over the guide cross-section for the slider on the guide attachment (27a,27b) towards the bearing cheeks (26a,26b). These projections have at least on their outer faces remote from each other hook-like rear cut profiled sections (34a,34b). A cap or bridging member (32) can be pushed over these projections and where applicable over the bearing cheeks. On the pocket-like inside of the bridging member are detent barbs (37a,37b) complementing the rear cut hooked sections.
