Abstract (en)

A toner image fixed on a substrate is provided characterized in that i) said toner image comprises fused toner particles and ii) said toner image comprises on top of it a non-image wise applied radiation cured layer, said layer having a thickness between 1 μ m and 20 μ m. Said radiation cured layer is formed by applying a UV-curable composition on top of the toner image. A method and an apparatus for producing a toner image with on top of it a radiation cured layer are also disclosed.
