Abstract (en)  
[origin: WO9732088A1] An anchoring device (10) comprising a spike (11) for driving into the ground. A head portion (13) is located at the top of the spike (11) and an attachment loop (14) is secured to the anchoring device below the top and is moveable between a raised position in which a portion of the loop (14) projects above the top of the head portion (13) and a lowered position in which the loop lies below the top of the head portion. The loop (14) is placed in the lowered position when it is desired to drive the spike into the ground so that the top of the head portion may be struck with a hammer without damaging the loop (14). The loop may be placed in the raise position when it is desired to attach a chain or cable for tethering an article to the ground.
