Abstract (en)
[origin: DE19607917A1] The invention concerns an electrohydraulic lifting device with a housing (1) in which are disposed a pump (3), which is driven by an electric motor (2), and a piston on which the pump (3) acts with hydraulic fluid, the piston rod (5) projecting out of the housing. Arranged inside the housing is a device (8) for displaying the piston rod lift position. This device (8) continuously indicates the lift position in the form of electric signals which can be detected outside the housing.
