Abstract (en)

[origin: WO9733209A1] A watch with a rotary rim combined with an axial pawl system and a ring for fitting the rotary rim (2) onto the band (4) as well as centring, retaining and angularly positioning said rim. The ring (8) has a substantially U-shaped cross-section of which one inner side is engaged by the band while the other side has a projecting surface (20) on which the rim (2) is mounted. The pawls consist of flexible blades (26) cut out of the flat bottom wall (18) of the ring (8). The system is easy and inexpensive to manufacture and mount.
