Abstract (en)

Rail bars (1,2) are connected by means of connecting plates (4,5), being placed on each side of the rail bar lying in line. Thereafter a curing adhesive is injected into the space between the respective connecting plates (4,5) and the rail bars (1,2). At the end of the connecting plates (4,5), sealing members (11,12) in the form of a U adapted to the shape of the web recess of the rail bar are provided. One of the legs of the U runs parallel to the foot and the other leg runs parallel to the rail surface of the rail bar. <IMAGE>
