Abstract (en)  
[origin: DE19516946A1] The invention relates to a milling tool, especially for the orthogonal rotary milling of crankshafts (20), with a basic body (2) having chip spaces (3, 4) and with several removably secured cutting tools (5, 6). The essence of the invention is that cutting components (5, 6) of identical size and shape are fitted for both mainly peripheral machining and mainly frontal machining and that they are arranged alternately at the periphery and the front.
