Abstract (en)
[origin: WO9633919A1] A plastic pallet having an upper platform (12) structure and a plurality of modular plastic legs (16) of box configuration fused to and extending downwardly from the underside of the platform structure. In one embodiment, the modular plastic legs (16) are formed of upper and lower molded plastic parts fused together to form the box configuration (16) and each further including a central column structure (30, 130) positioned within an outer skirt (24, 124) defined by upper and lower parts. In another embodiment, the modular plastic legs are formed of left and right molded plastic parts fused together along a generally vertical seam line (215) to provide the box configuration, and the upper ends of the legs are seated in downwardly opening pockets (228) provided in the lower face of the platform structure. In either embodiment, the pallet may also include a base structure (14) positioned beneath, and fused to the lower ends of the legs to form a double-faced pallet. The platform structure and base structure have a twin sheet configuration.
