Abstract (en)  
[origin: CA2174695A1] A packaging-type tablet dispenser consists of two major sections connected by a thin plastic hinge joint and made in a single injection molding step. After the box is filled with its intended contents, a closing cap is engaged with the container portion of the dispenser which correctly and automatically positions itself in one of two desired positions: one of which is the closed position and the other of which is a dispensing position. A clearly discernible click noise is generated as the cap is moved to each of the defined positions. The packaging box can be operated single-handedly and the tablets can be seen in the dispensing chamber before being removed.
