Abstract (en)

[origin: WO9634945A1] The present invention is directed to a new cellulase composition for treatment and finishing of cellulose-containing textile materials. The strength properties of cellulose-containing textile materials have remained better in fabrics treated with the compositions of the present invention than the corresponding properties in cellulose-containing textile materials treated with earlier cellulase compositions. The main feature of the new composition is that it does not contain significant amounts of EGII-type endoglucanases.
