Abstract (en)
[origin: DE19609323A1] A sensor element, in particular for an electrochemical measurement sensor, is used to determine the oxygen content of gasses. The sensor element has a first electrode exposed to a measurement gas, a second electrode exposed to a reference gas, heating means for the sensor element and a reference gas flow channel that extends between the heating means and the second electrode. The reference gas flow channel (20) is branched at least in the area of the heating means (30).
