Abstract (en)

[origin: EP0825300A1] An installation shuttering arrangement is constructed and which on both sides of the rail (1) has an upper section (22) for bearing upon the cavity filling element (10,11). It also has an intermediate section (24) with openings (26,29), and a lower section (23) for shutting off the still fluid polyurethane. The polyurethane pours through the openings below the rail foot (4,14) in order to harden. The shuttering consists of two rows of shuttering boards (20,21) which lie adjacent to each other in each row.
