Abstract (en)

[origin: EP0825381A1] The annexed housing (13) is made of an insulating material and is dish-shaped, has a base, side walls and an opening directed into the luminaire interior. The edges of the opening have associated locking means for locking the dish shaped housing to a section of the light body wall with the base of the housing (13) directed outwards relative to the light body wall. The lamp socket (31) is arranged to be fitted into the housing (13). The base has an opening into which locking elements (17) arranged on the back wall of the socket are inserted. The housing (13) has a window type wall opening (34) arranged in a wall. A lamp socket (13) fits through this opening (34) in the transverse and longitudinal direction. The openings pass in the base for inserting the socket side locking elements into guide slits (36) directed towards the wall opening (34) for a transverse laying of the locking elements (17).
