Abstract (en)

[origin: EP0825673A1] The antenna has a first conductor element or patch (2) which is parallel to an earth plane (1). A first dielectric substrate separates the first conductor element from the earth plane. A feed is also provided. At least one other conducting element (3), preferably identical to the first, is superimposed on the first conducting element and also lies parallel to the earth plane. A second dielectric substrate separates the first and second conducting elements. At least one short circuit connection (8) connects together the first and second conductor elements. The conductor elements may both have a slot cut into them.
