Abstract (en)

[origin: WO9640534A1] Cruise control for regulating the speed of a motor vehicle with a processing unit (14) and a manually actuatable operating means (20) by means of which a selected speed can be set. On the operating means there is a switch (23), by means of which the driver can select if the selected speed is to be kept constant or if it is to constitute a minimum speed or a maximum speed. There is also a switch (24, 25), by means of which a permitted overspeed above a selected maximum speed can be set, so that a higher speed can be allowed when driving downhill, for the purpose of saving energy.
