Abstract (en)
[origin: DE19518247A1] A new type of water-resistant barrier material is proposed. The barrier material in question is intended for use in particular for finishing, forming or building up protective, adhesive and intermediate layers or films or in the production of unsupported films with excellent barrier characteristics against gaseous and/or liquid ambient media, in particular oxygen, air, water vapour and the like. Even a single layer of the proposed material has extremely low oxygen- and water-permeability values.
