Abstract (en)

The packaging box (1) for a solid or semi-solid product block (P) comprises a bottom (2) forming a receptacle for the block. The block is immobilised by a foam washer (8). A removable opercule (6), formed from a transparent PVC sheet, is located on the block surface and a removable cover (4) on the bottom can be used for opening or closing the box. Crenellations (32) in the opercule engaging in notches (46) in the cover ensure that opening the box by rotation of the cover causes rotation of the opercule relative to the product. This induces shearing between the opercule internal surface and the product surface.
