Abstract (en)

[origin: EP0826328A2] At least one brake bearing block (8) can be fitted on the support frame (1) or on the movable component part (3). The brake bearing block has two brake rollers (11), which roll on opposing brake surfaces (10) of the slide rail (7). The slide rail is of metal. The brake bearing block has a device (9) for the adjustment of the braking force exerted by the brake bearing block on the slide rail. The brake rollers guide the slide rail between them. The slide rail is U-shaped and the brake rollers are adjustable from the inside onto the U-arms. The brake rollers are supported on ball bearings in the brake bearing block.
