Abstract (en)

A workstation comprising a curved plan design and work surface. The workstation includes a curved work surface (30) supported by a frame (3) to optimize efficiency and worker comfort. The curved work surface includes a curved front edge (32) and a curved rear edge (34) connected by straight side edges (39, 41). The straight side edges are disposed about 90 degrees with respect to each other. The curve work surface optimizes the work surface by eliminating wasted corner spaces, thereby allowing a layout which places the parts and tools within easy reach of the worker and eliminates repetitive twisting and stretching by the worker. The frame (3) includes channels (8) for attaching parts containers, tools and other equipment as necessary for customizing the workstation for a particular work task. The workstation can be easily reconfigured by adding or deleting the parts containers, tools and other equipment using standard parts. <IMAGE>
