Abstract (en)

[origin: EP0826515A2] The brochure producing process comprises dividing the sheet into equal areas by a longitudinal fold (90), a front transverse fold (60), a middle transverse fold (70) and a rear transverse fold (80). The sheet is coated with spots of glue along the rear transverse fold, folded up at the middle transverse fold, glued continuously or with gaps along the upper transverse fold line from the longitudinal fold line, is folded up about the longitudinal fold line and then folded up or down about the upper and lower transverse fold lines which are now one above the other.
