Abstract (en)

[origin: EP0826516A2] The device comprises a slip case (2) which holds both a photo album (1) and the container (5) which holds the negatives. The slip case has on one end side a first opening (3) in which the album is inserted and on the other opposite side a second opening (4) for the negative container. The negative container can now be moved in and out through the closable second opening for easy access. The second opening can be closed by a closure cover (6) swivel mounted on the long side. The second opening is inclined with narrow sides (8) running at an acute angle to the edges of the slip case adjoining the long side supporting the closure flap. The closure flap (6) has suitably inclined side areas (10) connected by a tab area (11).
