Abstract (en)

[origin: EP0826854A2] The coupling device comprises a coupling plate (22) for each cylinder core (16). The device further has at least one coupling pin (36) for each cylinder core which is axially shiftable on the locking hub (10). It engages in its retraction position in the coupling state of the respective cylinder core with a mounting recess (50) of the coupling plate. The coupling plate has coupling recesses (50) for the corresponding pins (36), in which the pins engage. The locking hub comprises a ring section (12) in which for each cylinder core, an insert part is located.
