Abstract (en)

[origin: EP0826928A1] The electric cooking oven comprises a casing (1) enclosing a cooking container (2) defined by a top panel (20), a base panel (22) and side walls (23,24). An electrical resistance (3) having a tubular sleeve is arranged in a plane within the container, and the two ends (30,31) are accessible from outside the container, each end being supported in a hole (4,5) formed in the end walls of the box (23,24). Each hole incorporates a bearing (6,6') mounted in fixed support within the end wall. This carries the tubular sleeve within which the resistance heating element is supported, and allows the element to pivot to and fro.
