Abstract (en)  
[origin: EP0826932A2] Hot and or cold air is introduced into a room via at least one nozzle (4) in a spherical cap (3) over which grips a cover-ring (5) near the opening (2) in the pipe (1) in which the cap sits. The cover ring has at least one catch element (27) which fit into openings (9) in one wall (7) of the pipe near its underside (10). The cap is detachably fixed between the cover ring and an inward protruding edge (6) in the pipe. Opposite facing supports (25) on the cap each have an upward pointing, curved rolling surface (26). The cover ring has a guide ring (28) which has an inward pointing guide chamfer (29) and an outward pointing support chamfer (30).
