Abstract (en)

[origin: EP0827172A1] The mechanism (10) includes a mobile rail (14) which actuates the contacts (11) of four switches (13) placed inside a box (12). The rail is articulated to an arm (15). The mechanism also includes an electromagnet (16), with a mobile core (17), and a bistable control (18) which actuates the rail. The electromagnet supports the shell (16b) of a coil. The shell is provided with a guiding canal through which the core slides. A spring (22) is placed around the core to reset it in its original position.
