Abstract (en)

[origin: WO9735089A1] The modular seizing device for sliding traction, for roll-up shutter belts consists of two structures (1), that may be composed during installation onto a belt (C) for the traction of a roll-up shutter, so as to realize a knob with anatomic grasping crossed by a groove (2) in which said belt slides, and inside said groove an opening (7) is performed wherein a manual pressure element (5) is housed, provided with tabs (6) for taking hold by friction onto said belt (C), and which has the function of hooking said belt along the handle.
