Abstract (en)

[origin: EP0827703A1] A support (13) is joined to a guide rail. A height adjustable intermediate piece (14) is joined to the front panel (11) and to the support. The intermediate piece has a threaded bolt (17) parallel with the axis between the support and intermediate piece. A manual control wheel (18) is screwed onto the bolt and is immovable in the threaded bolt's axial direction, and movable across the axial direction. The intermediate piece has a hole (19) through across the threaded bolt's axial direction and has at least one segmented or continuous thread. A spindle (2) penetrating the support fits into the threaded hole and has a control lever (21) at its top end.
