Abstract (en)
[origin: EP0827781A2] A spraying globe with a front side outline edge has a deck motor arranged in a housing, the housing accommodating supply lines for the coating material, cleaning fluid and compressed air as well as at least one high voltage connector. At the globe front side of the motor housing at least one spray nozzle for cleaning fluid is arranged. The nozzle cooperates with a snap ring groove moulded to the motor housing facing the rear side front side of the spraying globe. The cleaning fluid arrives at the globe outer surface through the groove and loosens and removes contamination. The snap ring groove has a radial recess through which the cleaning fluid brought into the groove arrives at the outer globe surface.
