Abstract (en)

[origin: EP0827825A2] The press (1) has a pressing container (2) with through flow apertures in its walls. There is at least one expanding body (3) inside the press container, capable of being expanded to press out the press material between the container wall and the expanding body. There is also at least one pusher element which can move inside the container wall longitudinally. The expanding body is fitted centrally in the pressing container, and for at least the greater part of its length, expands radially and uniformly towards the pressing container. It has a control unit to set it to a preselected pressing volume.
