Abstract (en)
The system comprises a re-usable support (1) which can be compacted or deployed. The support has a rigid base (3) and rigid lateral components (7) which can be folded down. There is also a rigid cover (12) which can be fixed on the lateral components in the support deployed position and can be directly placed on the base in the compacted position. Fixings (8,11) and/or articulations (9,10) connecting the lateral components to the base are located outside the plane of the base (36) in the deployed position. The useful height of the deployed support is greater than the base length. The base has fixed rigid lateral parts (4) projecting from it which support the lateral components in the deployed position. The base and the cover have lateral holes (13) enabling passage of the forks of a fork lift truck.

Abstract (fr)
L'invention concerne un dispositif de manutention comprenant un support (1) réutilisable pour réservoir souple, ce support présentant une position compacte et une position déployée, ce support comprenant une embase rigide (3) et des éléments latéraux rigides rabattables (7), l'embase et chacun des éléments latéraux étant inséparables, le support comprenant en outre un couvercle rigide (12) pouvant être fixé sur les éléments latéraux en position déployée du support et pouvant être directement fixé ou posé sur l'embase en position compacte du support. Ce dispositif est simple, utilisable et réutilisable en toute sécurité, occupe un volume faible en position compacte et est manipulable par un seul opérateur. <IMAGE>
