Abstract (en)

The machine comprises a conveyer unit (10) for transportation of a printed sheet bearing a typographical signature. The conveyer unit has a number of arms (18) each with a grip (23) moved by the signatures (5,6). When each arm makes a rotary movement, the grip dip into the vacant transport assembly (10) belt sections (14) to lift the leading edge of the respective signature. The system reduces the difference in speed between the cutting cylinder surface and the related conveyer belt. The gap is minimised between adjacent signatures caused by the braking effect. The grip provides a reliable means of lifting signatures as they rise from the belt.

Abstract (de)

Die vorliegende Erfindung sieht eine Transporteinrichtung (10) für flache Druckprodukte, insbesondere für Signaturen vor. Eine Vielzahl von Armen (18), welche jeweilige Greifvorrichtungen (23) aufweisen, sind der Transporteinrichtung zugeordnet, von welcher die Signaturen (5, 6) bewegt werden. Bei einer rotierenden Drehbewegung der Arme (18) tauchen die Greifvorrichtungen in nicht-erhabene Teile (14) eines Elementes der Transporteinrichtung ein, um die Vorderkante der jeweiligen Signaturen zu ergreifen. <IMAGE>
