Abstract (en)

[origin: EP0828045A2] The lock has a transposable client locking mechanism and a management locking mechanism, which is also transposable. The auxiliary catch (4) of the management locking mechanism operates the transposing plate (3) of the client locking mechanism. A transposing plate with a stop blade (3b) is fitted under the auxiliary bar. This plate is lifted out by a control recess (3a) of the management key when the key is turned through 180 degrees . There may be a transposing plate (7) under the main catch (8) to act on the pack for the client locking mechanism.
