Abstract (en)
[origin: EP0828047A2] The lock has a latch (F) which projects out through a latch aperture (16) of the sleeve (3) and can be withdrawn by operating the presser. There is a projection (31, 33) shaped for the long side of the latch aperture and projecting into a corresponding neck formation (30, 32) of the latch head (10). This projection may be on the opposite long side to the inclined plane of the latch. It may be arc-shaped and may project for roughly the width of the aperture edge region adjacent to the projections into the latch aperture.
