Abstract (en)  
[origin: EP0828048A2] The lock (1) has a catch (13) lockable by a key. The key locking projection (29') or a key operated locking cylinder (29) engages in an engaging aperture (32) of a turning lever (25) in the casing above the keyhole. The free end of the turning lever acts with its free end sector in the catch locking direction on a catch operating pusher (22) which can be moved transversely to the direction of motion of the catch. This movement is transmitted indirectly to the catch.
